2 Pack Kydex Plastic Sheet Black 12" X 12" X 1/16" (0.060") Can be found on Amazon

1. Use 1:1 scale drawing on the other page as a template or CNC instructions to cut out the pattern out of Kydex plastic. Use a sharp utility knife. You will need to score the cutting lines first before cutting all the way through.
2. After all 4 pieces are cut out, use a heat gun or high heat source such as a BBQ lighter to heat the Red dotted line area. This should be bent at a 90 degree angle. Bend using the edge of a table or kitchen counter.
3. Heat the "fingers" that create the hinges. Use a large construction nail or similar object to interlace and bend the "fingers" around to create a hinge that can then lock into the corresponding slots.
